As both a medical and procedural dermatologist, Dr. Baron's focus is treatment and reversal of skin and collagen damage stemming from overexposure to the sun. Last fall, she was invited to present her educational lecture to Stanford University Family Practice residents and other doctors and nurses at O'Connor Hospital in San Jose. Her presentation, entitled "UV-A's, B's, and C's," provided a specialist's perspective on effective protection from and consequences of too much ultraviolet sun radiation.

--

Hospitals are interested in keeping their staff informed on the latest clinical and research-based facts on sun-related health risks. Dr. Baron was more than happy to provide a free training seminar based on her experience and education as a dermatologist. She says local educational seminars like these keep the community informed about the dangers of the sun so we can all enjoy California's beautiful outdoors safely throughout the entirety of our lives. {pullquote}...local educational seminars like these keep the community informed about the dangers of the sun so we can all enjoy California's beautiful outdoors safely through- out the entirety of our

lives.{/pullquote}

By the time the one-hour lecture was over, the room had filled up, to the point our photographer gave up his seat and others were left standing. Many questions were asked and the audience had a genuine sense of enthusiasm and interest on the topic. After the event, Dr. Baron concluded "Overall the presentation was a great success, and look forward to the next one."
